CLAIM AMENDMENTS

SEP 11 2006

1. (Currently amended) An apparatus, comprising:

one or more node components that, upon registration of one or more users in a second network subsequent to registration of one or more of the one or more users in a first network, serve to cause one or more mailbox profile portions, for one or more voice mailboxes that are associated with the one or more of the one or more users, to be copied from one or more first voicemail system components that are associated with the first network to one or more second voicemail system components that are associated with the second network, ~~contemporaneous with~~ on a location with of one or more voicemail messages, for the one or more of the one or more users, on one or more storage devices that are coupled with the one or more second voicemail system components through an Internet protocol network;

wherein the one or more mailbox profile portions comprise one or more addresses for one or more locations on the one or more storage devices that serve to allow the one or more of the one or more users to employ the one or more voice mailboxes on the one or more second voicemail system components to access one or more of the one or more voicemail messages on the one or more storage devices, and

wherein one of said first network and said second network is a wireless network.

2. (Previously presented) The apparatus of claim 1 in combination with the one or more storage devices, wherein a storage device of the one or more storage devices employs an address of a location on a second voicemail system component of the one or more second voicemail system components to identify a voice mailbox, of the one or more voice mailboxes, on the second voicemail system component; and

LUC-321/Green 2-2-2-3-33

6 wherein the voice mailbox corresponds to a voicemail message, of the one or
7 more voicemail messages, that is located on the storage device.

1 3. (Previously presented) The apparatus of claim 1 in combination with the one
2 or more storage devices, wherein the one or more second voicemail system
3 components comprise a plurality of second voicemail system components, and wherein
4 the one or more storage devices comprise a plurality of file servers; and

5 wherein a first voicemail system component of the plurality of second voicemail
6 system components employs the internet protocol network to access a first voicemail
7 message, of the one or more voicemail messages, on a file server of the plurality of file
8 servers; and

9 wherein a second voicemail system component of the plurality of second
10 voicemail system components employs the internet protocol network to access a
11 second voicemail message, of the one or more voicemail messages, on a file server of
12 the plurality of file servers.

1 4. (Original) The apparatus of claim 1, wherein the one or more second
2 voicemail system components employ the internet protocol network to any one or more
3 of retrieve, forward, and delete the one or more voicemail messages on the one or more
4 storage devices.

1 5. (Previously presented) The apparatus of claim 1 in combination with the one
2 or more storage devices, wherein the one or more voicemail messages are located on
3 the one or more storage devices, and wherein the one or more second voicemail
4 system components comprise one or more pointers to the one or more voicemail

LUC-321/Green 2-2-2-3-33

5 messages.

1 6. (Previously presented) The apparatus of claim 1, wherein the one or more
2 second voicemail system components comprise a first voice mailbox and a second
3 voice mailbox; and

4 wherein the first voice mailbox comprises an address of a location on a storage
5 device, of the one or more storage devices; and

6 wherein the second voice mailbox comprises the address; and

7 wherein the address is employable by one or more of the one or more second
8 voicemail system components to access a voicemail message, of the one or more
9 voicemail messages, on the storage device.

1 7. (Original) The apparatus of claim 6, wherein upon modification of the
2 voicemail message to comprise a modified voicemail message, the address serves to
3 allow access to the modified voicemail message from the first and second voice
4 mailboxes through employment of the address.

1 8. (Previously presented) The apparatus of claim 1, wherein the one or more
2 second voicemail system components comprise one or more voice mailboxes that
3 comprise one or more linked lists; and

4 wherein the one or more linked lists comprise one or more addresses of one or
5 more locations on one or more of the one or more storage devices; and

6 wherein one or more of the one or more second voicemail system components
7 employ one or more of the one or more linked lists to access one or more of the one or
8 more voicemail messages on one or more of the one or more storage devices.

LUC-321/Green 2-2-2-3-33

1 9. (Original) The apparatus of claim 8, wherein the one or more of the one or
2 more linked lists comprise one or more encryption keys that serve to allow access to the
3 one or more of the one of more voicemail messages.

1 10. (Previously presented) The apparatus of claim 1 in combination with the one
2 or more storage devices, wherein one or more of the one or more storage devices
3 comprise one or more linked lists that are associated with one or more of the one or
4 more voicemail messages on the one or more of the one or more storage devices; and

5 wherein the one or more linked lists comprise one or more addresses of one or
6 more locations on one or more of the one or more second voicemail system
7 components; and

8 wherein the one or more locations correspond to one or more voice mailboxes on
9 the one or more of the one or more second voicemail system components; and

10 wherein the one or more voice mailboxes are associated with one or more
11 intended recipients of the one or more of the one or more voicemail messages.

1 11. (Original) The apparatus of claim 10, wherein a storage device of the one or
2 more of the one or more storage devices serves to delete a voicemail message of the
3 one or more of the one or more voicemail messages upon deletion of a reference to the
4 voicemail message from each of the one or more voice mailboxes.

1 12. (Original) The apparatus of claim 1, wherein forwarding of a voicemail
2 message of the one or more voicemail messages from a first voice mailbox to a second
3 voice mailbox on the one or more second voicemail system components comprises

LUC-321/Green 2-2-2-3-33

4 copying of an address of the voicemail message from the first voice mailbox to the
5 second voice mailbox.

1 13. (Currently amended) The apparatus of claim 1, wherein the one or more
2 node components comprise one or more service control point components that are
3 associated with the second network, wherein the one or more mailbox profile portions
4 comprises one or more link information portions and zero or more setting information
5 portions; and

6 wherein the one or more service control point components, upon the registration
7 of the one or more users in the second network subsequent to the registration of the
8 one or more of the one or more users in the first network, serve to cause the one or
9 more mailbox profile portions for the one or more voice mailboxes that are associated
10 with the one or more of the one or more users to be copied from the one or more first
11 voicemail system components that are associated with the first network to the one or
12 more second voicemail system components that are associated with the second
13 network contemporaneous with on a location with of the one or more voicemail
14 messages, for the one or more of the one or more users, on the one or more storage
15 devices that are coupled with the one or more second voicemail system components
16 through the internet protocol network; and

17 wherein the one or more first voicemail system components are coupled with the
18 one or more storage devices through the internet protocol network; and

19 wherein the one or more link information portions comprise the one or more
20 addresses for the one or more locations on the one or more storage devices that serve
21 to allow the one or more of the one or more users to employ the one or more voice

LUC-321/Green 2-2-2-3-33

22 mailboxes on the one or more second voicemail system components to access the one
23 or more of the one or more voicemail messages on the one or more storage devices.

1 14. (Previously presented) A method, comprising the step of:
2 copying, upon registration of a user in a second network subsequent to
3 registration of the user in a first network, an address of a voicemail message on a
4 second voice mailbox, on a second voicemail system component that is associated with
5 the second network, from a first voice mailbox, on a first voicemail system component
6 that is associated with the first network, to move an association with the user from the
7 first voice mailbox to the second voice mailbox;
8 wherein the address serves to allow the user to employ the second voice mailbox
9 on the second voicemail system component to access the voicemail message; and
10 wherein one of said first network and said second network is a wireless network.

1 15. (Previously presented) The method of claim 14, wherein the first and second
2 voicemail system components are coupled with a storage device through an internet
3 protocol network, and wherein the step of copying comprises the step of:
4 changing on the storage device a correspondence of the voicemail message
5 from the first voice mailbox to the second voice mailbox.

1 16. (Previously presented) An article, comprising:
2 a computer-readable signal-bearing medium; and
3 means in the medium for copying, upon registration of a user in a second
4 network subsequent to registration of the user in a first network, an address of a
5 voicemail message on a second voice mailbox, on a second voicemail system

LUC-321/Green 2-2-2-3-33

6 component that is associated with the second network, from a first voice mailbox, on a
7 first voicemail system component that is associated with the first network, to move an
8 association with the user from the first voice mailbox to the second voice mailbox;

9 wherein the address serves to allow the user to employ the second voice mailbox
10 on the second voicemail system component to access the voicemail message; and

11 wherein one of said first network and said second network is a wireless network.

1 17. (Previously presented) The article of claim 16, wherein the first and second
2 voicemail system components are coupled with a storage device through an internet
3 protocol network, and wherein the means in the medium for copying comprises:

4 means in the medium for changing on the storage device a correspondence of
5 the voicemail message from the first voice mailbox to the second voice mailbox.
